

Yang Shaopeng(杨少鹏)

Wuxi, Jiangsu | 18262273079 | 18262273079@163.com | Birth: 1989.3

Summary

- >10 years IoT and communication service and application development, from device to edge and cloud, from hardware to software, covering multiple industries. Familiar with Bosch and Siemens digitalization and I4.0 products and systems.
- >6 years software project management, certified Siemens project manager. > 3 years Industrial IoT product and software management.
- >10 years programming experience, proficient in Web, data science, generative AI application development.
- 6Sigma green belt, familiar with quality management in electronics manufacturing.
- >17 patents, from sensor design to data analysis and AI applications.
- Fluent in oral and written English, having BEC Higher, TOEIC 980, CET6 certificates.

Education

Jiangnan University

Electronics and communication engineering

2011.9 - 2014.6

Master

Jiangnan University

Electronics information engineering

2007.9 - 2011.6

Bachelor

Experience

Siemens Wuxi Innovation Center Expert Engineer 2021.6-now Wuxi

1. Project manager for multiple projects, from local to global, from ToB to ToG

- Successfully implemented use case (bridge monitoring via IoT technology) as product owner and got funding from Wuxi Xinwu government. (Team size: 3)
- Project manager for loose-coupling topic as collecting and evaluating technology from IoT to edge to AI frameworks and hardware. Successfully hold a 2 days opensource event in Wuxi at 2023 and preparing for 2024. (Team size: 8)
- Project manager for Airlink (Siemens subway control system) new product prototyping, successfully designed and implemented (Containerization and communication services). (Team size: 8)

2. Architect and core developer

- Architect for predictive maintenance solution targeting at automotive industry. (Python, Vue.js, Postgres)
- Architect for edge machine learning data exploration tool. (Python, Vue.js, Postgres, Scikit-learn, Keras)
- Architect and developer for LLM application. (LangChain, Streamlit, Python, Postgres, Angular, Web Component)

Bosch China Innovation and Software Development Center Team Leader 2020.6-2021.6
Wuxi

1. Technical Project Manager for Tooling, Testing development and IoV (SpringBoot, Python)

- Responsible for project requirement, setup and delivery for different business units from customer (UAES), e.g. Internet of Vehicle.
2. Interface and senior developer for IoV project for Bosch Wuxi(Jira, SpringBoot, OSGi, RabbitMQ, PKI)
- Interface for customer requirement and delivery. Designed and setup MQTT architecture and PKI certification system. Implemented middleware in device using OSGi framework.
3. Team leader for Connectivity and Cloud development team(Java, C, Linux)
- Team leader for connectivity team and cloud team.
4. Internal resource management system based on Web(SpringBoot, Mysql, Bootstrap)
- Project leader for tool development based on SpringBoot web.

Bosch Rexroth (Changzhou) Ltd Sr. Software Engineer 2018.5-2020.5 Changzhou

1. Indoor localization system based on UWB and Bosch Production System(.NET, Python)

- Core member responsible for developing indoor localization system as SaaS. Including project management like requirement engineering and work package distribution to Indian outsourcing team, algorithm integration and verification from research team overseas; benchmark of different hardware and software suppliers.

2. China-German government project: Logistics optimization and collision avoidance based on 3D real-time localization(.NET, Eclipse Mita, C)

- Core member responsible for system and software development for real-time machine status collection IoT kit.

3. Industry 4.0 system localization and secondary development

- Responsible for I4.0 products from Germany to locate in APAC and secondary development.

Finisar cooperation Sr. Engineer 2014.7-2018.4 Wuxi

1. Test management system based on Web, Yield report system and big data analysis(.NET, R,SQL)

- Based on test requirements and 6Sigma, using big data analysis, developed real-time Kanban, yield report, SPC & GRR system, etc. Based on Cpk theory, realized predictive alert and maintenance.

2. Optical transceiver module test system development and data analysis(.NET, Labwindows CVI)

- Developed test system to collect data and /verify algorithm. As contact window to maintain data and test spec for US and Malaysia team.

Skills

Product and project management

requirement engineering, risk analysis, resource management, scrum, agile, result delivery

Organization and communication

result orientation, coordination, bilingual communication, self-starter, problem analysis

Software development

web backend, web frontend, data analysis, machine learning, LLM, GenAI, Linux, Docker
Industrial

IoT development

IIoT, Edge computing, Cloud service, Industrial protocol, data science
